CCS Media with Heimdal™ Security Patch & Asset Management

Deployment, Vulnerability and Asset Management.

To find out more, speak to your Account Manager, call us on 01246 200 200,
email us at letstalk@ccsmedia.com or visit our website at ccsmedia.com.

Anything. Anywhere. Anytime.

With Heimdal™ Patch & Asset Management, you can view and manage your software inventory and, at the same time, achieve preemptive vulnerability management. This scalable, flexible and intuitive solution can handle both Microsoft and 3rd party software on-the-fly, from anywhere in the world and according to any schedule.

With an intuitive, clean interface and comprehensive reports, you continuously have an overview of essential software, its security status and all the tools necessary to prove compliance.

Everything in one place, with granular controls so you can act precisely.

This way, you ensure that:

The software critical to your organisation's smooth running (internal, 3rd party or Windows related) is managed from a unified, secure interface.

Your organisation has a rapid deployment of security-critical patches and updates, for essential resilience against cyber threats.

By automating this process and allowing a granular control over your software environment, your internal resources are free to focus on more pressing matters.

Administrators can install and update automatically or grant privileges to users to manage their own software securely, according to custom-built, flexible policies.

Vulnerability management is automated, providing actionable reports for risk management.

Heimdal™ Patch & Asset Management and Infinity Management will help.

With the Infinity Management module, Administrators within any organisation also gain the unique ability to deploy custom, in-house software and patches that are not available in the Heimdal™ Patch & Asset Management catalogue.

Time and time again, authorities and independent parties have stressed the importance of automated vulnerability management.

Time and time again, organisations have struggled to follow these guidelines because of time, budget or platform constraints.

But that was the past.

Heimdal™ Patch & Asset Management and its optional Infinity Management module provide not only automated vulnerability management but also a full Software Asset Management.

Multiple deployment tools create confusion, slow down your reaction time and open your Enterprise to devastating malware and ransomware attacks.

99% OF EXPLOITED VULNERABILITIES

99% of the vulnerabilities exploited will be the ones known to security and IT professionals for at least a year.

Source: Gartner

\$5 MILLION IN DAMAGE COSTS

\$5 million – the average cost of a single ransomware attack.

Source: Ponemon Institute

3,785 CORPORATE DATA BREACHES

In 2017, as recorded in The Internet Crime Complaint Center (IC3). On average, 10 data breaches happen daily.

Source: FBI

Vulnerability management should not be a game of whack-a-mole, nor the biggest time-sink in your workflows because of antiquated, opaque solutions.

Move beyond SCCM / WSUS and discover this unique threat prevention and policy deployment tool for an unrivaled control over your entire infrastructure.

Heimdal™ Patch & Asset Management: the next-gen, fully automated patching and software management solution.

Exercise true control over your environment and build true resilience in front of critical cyber threats like ransomware.

Manage assets and mitigate vulnerabilities, by the click of a button.

To find out more, speak to your Account Manager, call us on 01246 200 200, email us at letstalk@ccsmedia.com or visit our website at ccsmedia.com.

Introducing patch and vulnerability management for Linux

Unifying Windows and Linux under a single banner – Patch & Asset Management can now provide powerful and insightful vulnerability and patch management for Linux-running machines and group policies.

Install, deploy, and push security and non-security updates/patch on any system anywhere and anytime, regardless of build. Compatible with Ubuntu 18.04+.

Patch & Asset Management for Linux will empower you administrators to:

- Quickly and securely deploy patches and updates for OS-specific, 3rd party, or proprietary software (via Infinity Management).
- Install and uninstall vulnerable applications or versions.
- Update unknown packages. Once enabled, all the unrecognised (digitally signed) packages will be automatically updated just like in the case of regular Windows update packages.
- Software asset inventory. Your administrators can quickly fetch relevant information on active clients or specific GPs on both monitored and non-monitored applications.
- Historical vulnerabilities. Your administrators will be able to fetch global or endpoint-specific data on historical vulnerabilities, current vulnerability, latest patches, date, versioning, availability, and more.
- Application blacklist. Active and scheduled blacklisting of both monitored and non-monitored third-party applications and software.
- Unified patching management. When all Patch & Asset Management modules are active, the customer can create and manage GP for devices running various operating systems (i.e., Windows, Mac).

Patch & Asset Management

True cyber resilience and security starts with efficient vulnerability management. It's also critical to demonstrate compliance with GDPR and UK PSN software patching regulation.

This next-gen approach to vulnerability management leverages Heimdal's fully secure Global CDN infrastructure to ensure that deployment fits the local endpoint needs.

Heimdal™ Patch & Asset Management provides not only automated vulnerability management but also Full Software Asset Management for your organisation to:

- ✓ See any software assets in inventory, alongside their version and installed volume
- ✓ Create inventory reports for accurate assessments and compliance demonstrations
- ✓ Update or downgrade the software or operating system you want
- ✓ Un-install a supported software you want to target
- ✓ Install the selected software to more or all your systems
- ✓ Allow users to install given software themselves
- ✓ Deploy custom software to the endpoints, anywhere in the world*
- ✓ Set the time you want to do updates

To find out more, speak to your Account Manager, call us on 01246 200 200, email us at letstalk@ccsmedia.com or visit our website at ccsmedia.com.

Your organisation can now:

See ANY software assets in inventory and their version and installed volume.

Create inventory reports for reporting or compliance purposes.
