

CCS Media

Penetration Testing

Penetration testing uncovers critical issues and demonstrates how well your organisation is protected.

CCS Media provides certified security engineers who can help you reduce your risk of a costly data breach by discovering critical, exploitable vulnerabilities and providing you with actionable intelligence for informed business related decision making. This increases your operational efficiency and improves your security risk posture.

Risk

Improve Security Posture and Reduce Risk

CCS Media penetration testing affords peace of mind by using our highly skilled experts to test your network, finding any vulnerabilities and sharing our advice to help you secure the network.

What is a Pen Test?

Our solutions act as an attacker and try to get into the organisations network. Known vulnerabilities are attempted first but if this proves unsuccessful then other routes will be found.

Internal Pen Testing

This is an on-site engagement and the objective is to get to the main admin through any means across the internal network. Most of our competitors stop there but we will ensure every single vulnerability is genuine and not a false positive.

External Pen Testing

This is an off-site engagement and the objective is to gain access to data - if we gain access to any confidential information we will call the customer immediately.

White Box or Black Box?

White box engagements are when the customer gives us the information we need and black box is where our solution has to find it and the customer will confirm.

Process

Improved Service Experience Through Consistent and Repeatable Methodology

CCS Media services provide an international first class service experience while still maintaining the 'personal touch.'

1. Customer Scoping Call

2. CCS Media Research

We will do research on the customer and find out what information is in the public domain, what email addresses are public and whether they have been hacked previously.

3. Discovery

This is different for white/black box but will proceed to use multiple tools to test and exploit vulnerabilities and tell any accessible IP addresses.

4. Validate Vulnerabilities

If they are found, we will ensure that we go as deep into the network as possible and make sure they are not false positives. Many of our competitors will simply just notify of vulnerabilities found.

5. Reporting

CCS Media will create an in-depth report which will show exactly what we accessed, where and how. Others may not show you the full path.

For more information speak to your Account Manager, call us on 01246 200 200, email us at letstalk@ccsmedia.com or visit our website at ccsmedia.com.
