

# The Right Audio Solutions for Successful Remote Working

# The Right Audio Solutions for Successful Remote Working

For virtually every organization across the globe, remote work has become part of everyday life. Employees once bound to centralized offices are now working from nearly everywhere. Home offices, Internet cafes, local coffee shops – and even the humble kitchen table – have been transformed into office spaces, and the remote-working trend isn't likely to change anytime soon.

In addition to the inherent safety it offers, remote working provides tangible benefits for both employee and organization alike. Employees enjoy greater autonomy, an improved work/life balance and added flexibility. Organizations benefit from reduced costs and greater employee satisfaction.

Perhaps the biggest benefit may be increased productivity. Evidence suggests that remote workers may in fact be more productive than their office-bound counterparts. In one study, remote working was found to boost employee output by up to 13%.\*

\* "The remote work experiment that upped productivity 13%"  
[www.bbc.com/worklife/article/20200710-the-remote-work-experiment-that-made-staff-more-productive](http://www.bbc.com/worklife/article/20200710-the-remote-work-experiment-that-made-staff-more-productive)

# Now more than ever, high-quality audio is vital

While the venue in which work is being done has changed, remote employees still face some of the same challenges they faced when back in the office – most notably poor audio, excessive noise and too many distractions.

In fact, 95% of workers – whether in-office or remote – admit that their concentration and efficiency has suffered due to sonic setbacks, and 69% report having to spend extra time on work tasks due to poor sound quality. All told, the average worker loses nearly a half hour of productivity per week due to poor sound quality on audio calls.\*\*

Whether in the form of buzzing and ringing devices, interruptions from family members, traffic noise or something else entirely, excessive noise and distractions threaten to undermine the benefits that remote working offers.

That's why it's vital that today's remote workers be equipped with superior-quality audio devices and collaboration tools – ones that are designed and engineered to meet the needs of remote employees. These tools should include many advanced features to help workers tune out distractions and concentrate and collaborate effectively

## 29 minutes

Amount of time the average worker loses per week due to poor sound quality on audio calls.

## 95%

of workers whose concentration and efficiency has suffered due to poor audio.

## 69%

report having to spend extra time on work tasks due to poor sound quality.

Active noise cancellation (ANC) to block out unwanted noises and distractions and enable concentration.

High-quality microphones for superior speech clarity.

High-quality materials for durability and years of maintenance-free use.

Comfortable to wear and made of lightweight materials to ease the strain of working long hours.

UC- and Microsoft Teams-certified, if possible, to ensure seamless functionality with today's leading Unified Communications technologies.

Wireless Bluetooth® technology, if possible, for outstanding mobility.

# Audio solutions designed for today's remote workforce

The EPOS ADAPT and IMPACT Lines of headsets and EPOS EXPAND 30 speakerphones are designed and built to meet the needs of remote workers. These premium audio tools offer state-of-the-art voice pickup technology to enhance speech and eliminate unwanted background noise, for outstanding concentration and collaboration, anytime and anywhere. They also feature exceptional microphone clarity that delivers an outstanding audio experience for both speaker and listener.

Every model included in the ADAPT and IMPACT Lines of premium headsets offers unparalleled comfort, best-in-class audio quality and the flexibility to adapt to any working situation. From advanced functionality to active noise cancellation, the ADAPT and IMPACT Lines of headsets offer state-of-the-art tools to make the most of your remote-work environment.
