Serviceable

Intuitive for Users

lockncharge cloud

Cloud-based software that saves time and money.

Automate manual processes for managing mobile devices to reduce wasted time, minimise device downtime, safely maintain devices with zero human interaction, provide secure charging on demand and much more.

Set Up and Manage Who is Allowed Access to Bays and Towers. LocknCharge Cloud has a built-in User Directory that enables admins to control who is allowed to use FUYL Towers™. Specific users can be granted access with RFID or a unique PIN.

Manage Multiple Towers from One Centralised, Web-Based Portal. Give designated admins detailed access to view and manage any number of Towers. Efficiently manage Towers by cascading settings to multiple Towers, groups of Towers or groups of users with "bulk operations", "station groups" and "user groups".

Securely Charge and Store Devices so They're Always Ready for Use. All bays contain a power outlet and a 2.4 amp USB port so you can securely charge almost any device, including: iPads, tablets, laptops, mobile phones, Chromebooks and more.¹

Integrate LocknCharge Cloud with External Systems. Take device management to the next level. Using Cloud API and webhooks, LocknCharge Cloud can be integrated into external and/or existing IT infrastructure.

Hardware that works harder so you don't have to.

Case Study Snapshots

Allegiant Airlines

The Story

Allegiant is in the midst of a digital transformation. The pilots and flight attendants depend on fully-charged and up-to-date iPads to perform their jobs. Sometimes the devices are broken or lost, and there is an immediate need for a replacement iPad. In the past, Allegiant would be dependent upon an IT team member to manually replace an iPad, which is time consuming and expensive. Now with a LocknCharge FUYL Tower 15 at every Allegiant employee lounge in airports across the US, the replacement iPad process is simplified, and they can keep business running 24/7.

Workflow: iPad Replacement Program

- ✓ **As a pilot or flight attendant** with a broken iPad, I need immediate access to a new iPad from the FUYL 15 so that I can fly the aircraft as scheduled.
- ✓ **As a technical support specialist**, I want to be able to control all 14 Allegiant Airport FUYL Towers through one web-based portal so that I can efficiently manage devices without wasting time manually coordinating and replacing devices.

Shaker Heights School District

The Story

Worldwide, COVID-19 rushed school districts to remote learning. Prior to these closings, Shaker Heights had set themselves up with agile technology that made device management a smooth transition. With six FUYL Towers, the district's tech team developed a safe, self-service drop-off and pick-up procedure for any student Chromebook repair and replacement.

Workflow: Device Replacement / Pickup Program

- ✓ **As a parent** who is helping my child with digital curriculum, having a streamlined process to manage technology has been critical. I can replace my child's broken device or accessory (such as a cable) without any human interaction. Minimal device downtime ensures my child doesn't fall behind in class.
- ✓ **As a technical support specialist**, the FUYL Tower has acted as a part-time IT support employee. We were able to seamlessly switch our FUYL Towers from public charging to a break/fix model so that they function like an Amazon locker. When schools reopen, we'll use the Towers in both modes to meet the needs of our students and families.

Customer Benefits

The ROI on a FUYL Tower investment averages just 10-16 weeks.

- ✓ **Device Replacement Program:** Businesses and schools are able to store devices in the "ready-to-go" state, which eliminates delays replacing broken devices and keeps employees/students on track.
- ✓ **Simplify Workflow:** Makes life easier for IT's management of replacement devices.
- ✓ **Monitor and Manage Devices:** Administrators can track notifications around device removal and use.
- ✓ **Protect Your Investment:** Securely store devices when not in use to protect your technology investment and data.
